Summary

`lawn` is an R package to provide access to the geospatial analysis capabilities in the `Turf` javascript library (R Core Team 2016; Herlocker 2016). `Turf` expects data in GeoJSON format. Given that many datasets are now available natively in GeoJSON providing an easier method for conducting geospatial analyses on these datasets in R is desired. Additionally, many existing packages (e.g. `sp` and `rgeos`) do provide similar analysis capabilities; however, they require data be converted to `sp` objects and also have external dependencies (e.g. `gdal` and `geos`) that can be challenging to maintain on some systems (Roger S Bivand, Pebesma, and Gómez-Rubio 2013; Roger S. Bivand and Rundel 2016; GDAL Development Team 2015; Team 2016). To address these challenges and facilitate geospatial analysis of GeoJSON formatted data, we developed the `lawn` package.
